Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Sesha is developing a weather monitoring system for a region with multiple weather stations. Each weather station collects temperature data hourly and stores it in a 2D array.

Write a program that can add the temperature data from two different weather stations to create a combined temperature record for the region.

Input Format

The first line of input consists of two space-separated integers N and M, representing the number of rows and columns of the matrices, respectively.

The next N lines consist of M space-separated integers, representing the values of the first matrix.

The following N lines consist of M space-separated integers, representing the values of the second matrix.

Output Format

The output prints the addition of the two matrices in N rows and M columns, representing the combined temperature record.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3 3

1 2 3

4 5 6

7 8 9

1 1 1

2 2 2

3 3 3

Output: 2 3 4

6 7 8

10 11 12

Answer

// You are using Java

```
import java.util.*;
```

```
class main{
```

```
    public static void main(String[] args){
```

```
        Scanner inp=new Scanner(System.in);
```

```
        int r=inp.nextInt();
```

```
        int c=inp.nextInt();
```

```
        int arr[][]=new int[r][c];
```

```
        int arr1[][]=new int[r][c];
```

```
        int sum[][]=new int[r][c];
```

```
        for(int i=0;i<r;i++){
```

```
            for(int j=0;j<c;j++){
```

```
                arr[i][j]=inp.nextInt();
```

```
            }
```

```
        }
```

```
        for(int i=0;i<r;i++){
```

```
            for(int j=0;j<c;j++){
```

```
        arr1[i][j]=inp.nextInt();
    }
}
for(int i=0;i<r;i++){
    for(int j=0;j<c;j++){
        sum[i][j]=arr[i][j]+arr1[i][j];
        System.out.print(sum[i][j] + " ");
    }
    System.out.println();
}
```

Status : Correct

Marks : 10/10
